

Component Guardrail

Component guardrail is tailored for each project, using Strongtight components for a stable system with minimal micromovement. Component guardrail provides passive fall protection that is site-specific and permanent. The SafePro patented ballasted guardrail base uses proprietary geometry to achieve maximum safety with minimal weight, and disperses weight across a large footprint to ensure that a roof's membrane is never compromised.

Features and Benefits

- **Weight:** Guardrail system is 1.3 psi per base.
- **Storage:** Units nest together for easy storage and transportation.
- **Minimize Visibility:** The Contoured guardrail design minimizes visual impact from the ground level by angling away from sightlines, creating a less obstructive appearance.
- **Advanced Base Design:** SafePro's ballasted base is 57 pounds and can alternate directions for stability.
- **Non-Invasive:** Non-Penetrating design with support pad (sold separately).

Meets OSHA and Cal-OSHA standards
