

## Loading Dock Safety Gate

OSHA-compliant loading dock fall protection

Loading docks are high-traffic areas in manufacturing and distribution facilities where safety risks are significant. Every material delivery and outgoing shipment exposes workers to potential fall hazards. Keeping loading dock doors open and unguarded increases the likelihood of accidents and also puts your business at risk of OSHA compliance violations.

### Key Risks of Unprotected Loading Docks

- **Fall Hazards for Forklift Drivers and Workers:** Risk of severe injury when working near open dock edges.
- **OSHA Compliance Issues:** Unprotected loading docks violate OSHA regulation 1910.23(b)(1), which requires fall protection for open edges.

### Our Loading Dock Safety Gate Solution

Protect your employees and avoid costly penalties with our simple safety gate system:

- **Fast and Simple Installation:** Shipped as a kit with all necessary hardware and anchors, for minimal downtime and quick setup.
- **Superior Design:** No more lifting or pinch-point hazards found in traditional gate systems. Our rolling gate is easy to open and close.
- **Cost-Effective Protection:** High value at a fraction of the cost of other solutions.

Available in 6', 8', 10', and 12' lengths to fit standard loading dock doors. It is easily rolled open temporarily when access to a loading truck is needed, then rolled back into place and locked when loading and unloading is complete. Diversified can also provide custom guardrail solutions to protect entire shipping and receiving areas if needed.

### Features

- OSHA-compliant and tested
- Made in the U.S.A.
- Fast and simple installation
- Rolling design for easy use
